

How to use the Nikon FM digital

Enable tethering on your smartphone first

Now we just need to watch a youtube video.

<https://www.youtube.com/watch?v=vqoochG0a4w>

--Operating Environments--

Nikon FM FM2

(Maybe it works FE FE2)

Smart phone is android10

Using Tethering

The image is 0.5 megapixels.

Shutter speed from bulb to 1/4

Changing the shutter speed does not change the image that can be taken.

Description of the sound of the speaker announcing the status

Pi >> Wifi connection successful

Pi Pi >> Successful shooting

Piiiiiii >> Image Transfer Success

Pi Pi Pi Pi >> Go to sleep mode

Pi Pi Pi Pi Pi Pi >> Wifi connection failure

**This camera has a small sensor, so it can only capture a very small area in the viewfinder.
It is very difficult to focus. Even if you can make it, it's not always possible to shoot as intended.
The shutter and shooting work together, but you can't shoot in the dark
because you're using the brightness to the sensor as a threshold.**

Still, it's glad to have someone to build with and get excited about.

This is the limit of my current technology. I'd be happy if we all could make it even better.
